

## **Shadow Robot Company**

[Shadow Robot Company](#) is a UK robotics technology developer, specialising in manipulation and grasping. Shadow's interest in assistive robotics goes back to our NESTA Invention and Innovation award in 2001, where we investigated how to apply the then-state-of-the-art in robotics to assistive technology. Today, we are active in the [RAMCIP H2020 project](#), which is developing robots to help people suffering from mild cognitive impairment, and are excited to be engaged in the new CHIRON project.

In CHIRON, we will be bringing decades of experience in the development of soft, friendly, modular robotics, control systems for robots and integration of cutting-edge research into real hardware systems and prototypes together. We look forward to transforming how people think about aging and care with robotics!
